RESEARCH AND DEVELOPMENT (R&D)

(2018-19)

In 2018-19, SEICOM formally activated its R&D Cell to build a strong research culture. The college invested in specialized laboratory infrastructure – for example a new biotechnology lab and upgraded computer lab – to support faculty and student research. Faculty members initiated research projects in commerce and science, publishing papers and presenting their work at conferences. Students undertook guided research projects and participated in science and business exhibitions. SEICOM also began forging industry links by signing its first MoU with a local tech organization to enable internships. Workshops and guest lectures on research methods and innovation were organized to introduce students to scholarly inquiry.

- **Initiatives:** The R&D Cell launched programs such as student research awards and seed funding for innovative projects.
- **Projects & Achievements:** Faculty and students completed research projects in areas like data science and biotechnology, resulting in publications and prize-winning project displays.
- **Collaborations:** An MOU with a regional technology firm provided internships and real-world project mentorship for students.
- **Events:** The College hosted its first "Introduction to Research" seminar and workshops on topics like data analytics and entrepreneurship.
- **Policies:** A research incentive policy was introduced to motivate faculty publications and student innovation.
- **Infrastructure:** New lab equipment (e.g. biotech research kits, updated computer hardware) and library resources were added to bolster research support.
